

Business Requirements:

A CURA health service project can have a variety of business requirements, depending on the specific goals and objectives of the project. Some potential requirements may include:

1. Accurate and up-to-date information about doctor availability:

- This requirement is clear and addresses the need for accuracy and currency in the information. It could benefit from additional details on how accuracy and currency will be verified during testing.

2. Flexibility:

- The requirement for flexibility is clear, but it could be made more specific. Consider specifying the types of changes that the system should be able to adapt to and how this adaptability will be tested.

3. Compliance:

- The requirement to comply with relevant laws and regulations is clear. However, it would be beneficial to specify which laws and regulations the project must comply with and how compliance will be validated during testing.

4. User-friendly interface:

- This requirement is clear in stating the need for a user-friendly interface. To enhance testability, you might specify particular aspects of user-friendliness, such as navigation, readability, or ease of data input.
